

## Add Security to Your Supply Chain and Improve Productivity

### **TRACK & MONITOR:**

-  Trucks
-  Trailers
-  Cargo Containers
-  Heavy Equipment
-  Fixed Assets
-  Maritime Vessels

How secure is your supply chain? Organized theft of commercial vehicles and their loads costs businesses billions of dollars a year globally.

Honeywell Global Tracking's asset tracking solutions help you track and monitor fixed and mobile assets around the world – providing full operational visibility for all assets, wherever they are. If something happens, you'll be notified in near real-time.

A well-working asset tracking solution will also lead to productivity gains, significantly reduced fuel and maintenance costs, as well as lower insurance premiums.

### **Full-Featured Satellite Tracking Terminals**

The all-new TAM-442 satellite tracking terminal from Honeywell Global Tracking is at the heart of the company's asset tracking solutions and offers breakthrough new features:

- Over-The-Air (OTA) configuration of reporting rates and more
- Ability to charge terminals using a vehicle auxiliary power socket
- Ability to connect two external sensors simultaneously
- New, ruggedized connectors that will last for years in the field
- Class 1/Div 2-certification for use in oil & gas environments
- Improved battery life

The TAM-442 is designed for tracking applications with frequent reporting rates where the terminal is regularly moved between assets.

## Return on Investment

Tracking solutions from Honeywell Global Tracking lead to reduced fuel costs, reduced capital expenses, and lowered insurance premiums – providing a quick return on investment.

In addition, users can reduce satellite airtime costs by continually optimizing the reporting rate of each terminal using programmable geofences. Automatically increase the reporting rate when transporting high-value assets in challenging areas, and switch to a less frequent reporting rate when you reach your destination.

## Visibility

Honeywell Global Tracking's satellite-based asset tracking solution provides full visibility into your supply chain performance, as well as the tools required to act on emerging information – anywhere in the world.

## ViewPoint

As with all satellite terminals from Honeywell Global Tracking, the new TAM terminals can be tracked in ViewPoint, our web-based tracking and mapping application.

In addition to advanced geofences, ViewPoint offers features like custom map layers, powerful fleet management tools and notification services that allow you to keep a close eye on all the assets in your fleet, minimize downtimes and maximize productivity.

## Global Cargo Thefts – Facts & Figures

- More than \$18 million of cargo was stolen in the US in the fourth quarter of 2014 alone <sup>1</sup>
- In Q3, 2014, the average loss value per cargo theft incident in EMEA was €210,869 <sup>2</sup>
- Maritime cargo thefts in Southeast Asia increased by 21% in 2014 compared to previous year <sup>3</sup>

<sup>1</sup> CargoNet Theft Report, Q3, 2014. <sup>2</sup> TAPA, Setting the Standard for Supply Chain Security.  
<sup>3</sup> Maritime Crime Figures 2014, Dryad Maritime.

## From Honeywell Global Tracking's Customers:

*"The TAM-442 is a versatile tracking terminal for both trucks and trailers, and a perfect fit for the transportation industry. The long-lasting battery, the external door sensor and alert buttons, make the TAM-442 a complete intrusion detection and security system for transport and logistics companies."*

**Juan Jose, Deputy Director, Spacenet**

*"The TAM 401 is an extremely powerful and reliable system to monitor maritime assets globally. It's easy to install quickly and covertly where no external power is readily available, making it a great fit for our maritime security solution."*

**Brian Kane, Director of R&D, GOST**
